

Controlling & Eradicating Invasive Plants

By the Ohio Chapter International Society of Arboriculture

What are Invasive Plants ?

An invasive species is an introduced organism that negatively alters its new environment. Although their spread can have beneficial aspects, invasive species adversely affect the invaded habitats and bioregions, causing ecological, environmental, and/or economic damage. In some cases invasive plants cause trees to be slowed in their growth. Contact a local ISA Certified Arborist on the best means of control and eradication of these invasive plants.

Bush honeysuckle

Glossy European buckthorn

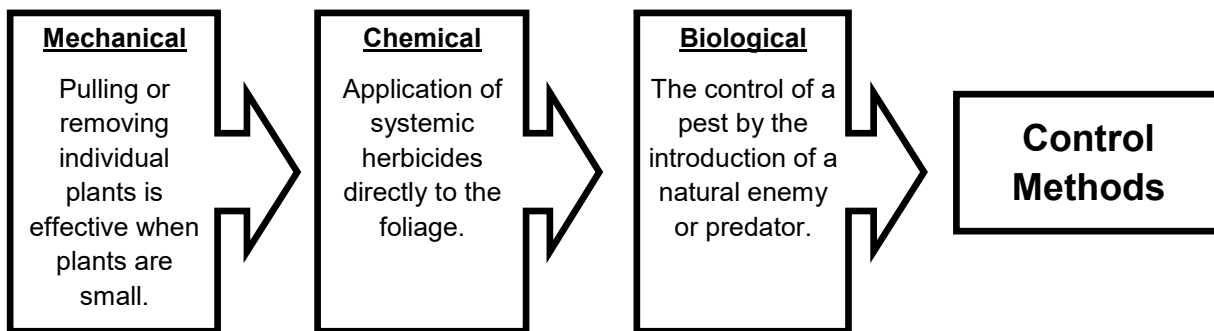

**Some of the
worst
invasive plant
species in Ohio**

Kudzu

Multiflora Rose

The Ohio Chapter International Society of the Arboriculture is committed to advancing responsible tree care practices through research, technology, and education while promoting the benefits of trees. We remind those who own and manage trees, that trees need to have Invasive plants removed near them to improve tree health and vitality.

There are over 1,000 qualified tree experts in the Ohio that have been designated by the ISA as Certified Arborists. To find an ISA Certified Arborist in your area, visit www.Trees4Ohio.org.
